Literature survey plays vital role in any research. It describes how the proposed research is related to prior research in statistics. It shows the originality and relevance of target research problem. It justifies proposed methodology. On the other hand, knowledge on review papers is also important to justify the research work conducted by student. In this context Department of Chemistry, AIET organized a research methodology seminar on “literature survey & review papers” on Tuesday, 01/03/2016 in Auditorium.

Dr. Basavaraju B, Department of Chemistry was the resource person of the seminar. Resource person explained that section which shows the various analyses and research made in the field of researcher interest and the results already published, considering the various parameters. “It is the most important part of researcher report as it gives him/her a direction in the area of his/her research. It also helps to set a goal for analysis - thus giving the problem statement” he added.

The seminar was conducted for faculties and students.
